About Project ISSSL

Project ISSSL is a longitudinal, online survey study of couples’ emotional and relational adjustment to hearing and/or vision loss. The study was launched by the University of Copenhagen, Denmark and the University of Montreal, Canada on July 11th 2016. The aim of the project is to learn more about couples’ support and coping mechanisms in order to inform counselling and rehabilitation services. Responses will go towards the formation of scientific articles and a support booklet for couples experiencing sensory loss. The study is open for participation until September 5th.

More Details: www.psychology.ku.dk/isssl

Who has taken part so far?

Data collection has been very successful. To date we have received 190 project sign-ups.

Some group details based on completed surveys:
- 33 couples living with hearing loss
- 54 couples living with vision loss
- 57 couples living with dual-sensory loss

Project Testimonials:

“I have taken many surveys, this was the most thorough!”
“I'm grateful for your work and look forward to seeing the results.”
“The survey is well done. Thank you for inviting me.”
“Love that you are working on this”
